What planet is an icy
blue ball of **gases** and
liquids?

URANUS!

Uranus is part of Earth's
Solar System.

SUN

MERCURY

VENUS

EARTH

MARS

JUPITER

A diagram of the outer solar system. At the top is a red curved band with white stars. Below it, three planets are shown on their orbits against a black starry background. Saturn is on the left, a large yellowish planet with a prominent ring system. In the center is Uranus, a smaller light blue planet with a thin ring. On the right is Neptune, a medium-sized dark blue planet. The orbits are represented by thin grey lines.

SATURN

NEPTUNE

URANUS

**It's the seventh planet
from the Sun.**

ABOUT THE AUTHOR

Chaya Glaser enjoys looking up at the stars and reading stories about the constellations. When she's not admiring the night sky, she can be found playing musical instruments.

URANUS

Cold and Blue

What planet is cold and blue? Uranus! Its temperature can dip to about -366°F (-221°C)! This super-cold planet is made of liquids and gases—including the gases that help give Uranus its beautiful blue-green color.

Look inside to discover these and other fascinating facts about Uranus.

EARTH: No Place Like Home

ICY COMETS: Sometimes Have Tails

JUPITER: The Biggest Planet

MARS: Red Rocks and Dust

MERCURY: The Smallest of All

OUR MOON: Brightest Object in the Night Sky

NEPTUNE: Far, Far Away

PLUTO: The Icy Dwarf Planet

SATURN: Amazing Rings

THE SUN: A Super Star

URANUS: Cold and Blue

VENUS: Super Hot
